React FullStack Developer with 2 years of experience, working with React, Java + SpringBoot and MySQL. I'm a curious person that strongly believe in team work and communication, and enjoys learning new things on my own and from other team members. My professional objective is to help develop enjoyable applications and get to know another cultures, that's why I'm currently looking for new challenges with international team members.

EXPERIENCE

Ensolvers,

Ampit — *September, 2021 - Present*

- Fix and create junit Tests for services and controllers implementing test containers and db dumps to reduce test cycles iteration times.
- Added Media player discriminator to handle player's display behavior.
- Updated chat and wallet summary class components to functional components. Reducing unnecessary renders and requests.

Tech Stack: React, React Native, Java, Spring Boot, MySQL.

Ticketon — *January, 2022 - July, 2022*

- Purchase Flow implementation with ticket's booking and automated cancelation upon time limit reached, reducing amount of unfinished purchases.
- Worked with the UI/UX team to apply mock ups styles into the proyect's final results. Using Material UI v4 to create base styled components to improve development speed.
- Mobile First responsiveness ensurance and App Styles standarization.

Tech Stack: React, React Native, Java, Spring Boot, MySQL.

Alkemy, FullStack Developer — *March, 2021 - August, 2021*

- Helped setting up CRUD Redux store with Local Storage implementation to reduce unnecessary fetch calls.
- Updated application tables design for mobile viewports and homogenize styles and classes to improve readability.

Tech Stack: React, Redux, Tailwind CSS, Nodejs, Express, MongoDB.

PROJECTS

FrontEnd Developer (ENERGY <code>) - URL - 2020
